

Earth4Energy Experience, What I Truly Think After Buying This Hyped Product

"Earth 4 Energy": An Overview

"Earth4 Energy" teaches people how to build solar panels and wind generators in a comprehensive handbook. "Earth 4Energy" comes with well written instructions and a video that makes it very easy to follow. The parts for the systems are also very easy to find and affordable. \$300 and parts found at your local hardware store can produce both systems. As well as being easy to use the systems also significantly cut down the monthly energy bills. People can breakaway from their electricity companies by using these simple systems.

"Earth4Energy" Review

For quite some time, I've really been thinking of what I can do to save the planet. I am worried about leaving the world in a worse place than I received it. After all, I have kids that are going to inherit this planet from me, and I know if I don't do something, they will be doomed. That's why I decided to try "Earth 4Energy".

Overview

"Earth4 Energy" was created by a man named Michael Harvey. Harvey has worked with renewable energy field for 15 years. "Earth 4Energy" is a do it yourself kit and it was designed to teach people how to start using renewable energy in their own homes.

Our Experience with "Earth 4Energy"

I was a little nervous when I first started with "Earth 4Energy". I didn't know if I would be able to follow "Earth 4Energy" because I am not very technically skilled.

But I was soon convinced that I had no need to worry. I started off watching the video, and I could tell I was going to be able to do this. The video took me through everything step by step. It looked so easy I was amazed. You wouldn't think building solar panels and wind generators was easy, would you?

As soon as the video was over I was ready to get shopping. I didn't have a big budget, so I was concerned. Again, my fears were quickly put to rest. My local hardware store only cost me about \$300. With that amount I was able to get everything I needed for both the solar panels and the wind generator.

Even though I could have just settled for doing one of them I decided to try both the wind and the solar. I wanted to give the planet all the effort I could and for that price it seemed silly not to.

I was able to build my own little power station. I was also about to learn a lot more than just facts about wind and solar panels. "Earth 4Energy" gave me tips on how to find free batteries to store energy and how to build a renewable energy generator. With the information I was given, I now have full protection, even when there is a power outage.

I have been talking a lot about the environmentally friendly aspects of "Earth 4 Energy". But here is my dirty little secret. I love how much I save on my bills each month almost as much as I love being eco friendly.

I knew helping the environment would make me feel great, but spending less every month makes me feel even better. I don't even owe a thing some months. That is a great feeling.

The Bottom Line

"Earth 4Energy" is an affordable and effective product. I'm, saving money while helping the environment.

Using "Earth4 Energy" got me the best of both worlds. I am able to ease my conscious by going green, and I'm able to save money at the same time. Who wouldn't want that?
