

Eco-Friendly Bags: A Convenient Option When Shopping

In recent years, the world has become a much more environmentally conscious place. This is due to research showing the negative impact of such conditions as global warming, diminishing natural resources, and the widespread destruction of our natural environment. Now, individuals and companies are looking for ways to create a much more environmentally friendly world. One way retailers and individuals are helping the planet and its resources are replacing traditional plastic shopping bags with eco-friendly bags.

Reusable eco-friendly bags are a convenient and environmentally friendly option when shopping. According to the Food Marketing Institute, "the average American walks away from the grocery store with 5 to 10 bags each trip. This adds up to 600 - 1 200 bags per year." The Australian Government in 2002 identified "that if a consumer used reusable bags for 1 year they would consume only 9% of the energy and produce only 10% of the greenhouse emission of plastic bags." As well, according to the American Forest and Paper Association, "In 1999, the U.S. alone used 10 billion paper grocery bags." This is a huge amount of trees being destroyed.

The best alternative when shopping is using eco-friendly reusable bags. These bags are available in many forms and sizes to meet every shopper's needs. Sizes can range from a small tote bag to extra large bags, allowing shoppers to carry a wide range of items. They are also available in a variety of designs and colors. It is a cost effective method of shopping and convenient because all that one has to do is return the bags to their vehicle when they have finished using them.

Quality eco-friendly bags are made of materials that do not harm the environment during their production. They are biodegradable so there are no damaging chemicals in the bags. You will not have to worry about leaving a negative impact on the environment. Many of these bags are made of 100% durable cotton with strong reinforced straps. As well, the canvas shopping reusable bags provide an easy and cost-efficient way of reducing your impact on the environment. The best part is they do not have to be thrown away after use.

According to the Environmental Protection Agency, "more than 380 billion plastic bags are used in the United States every year. Of those, approximately 100 billion are plastic shopping bags, which cost retailers about \$4 billion annually." The production of plastic bags eats up millions of gallons of oil and manufacturing paper bags has a devastating effect on the forests. As well, it can take up to a thousand years to break down while toxins from the bags leak into the ground and contaminate the environment. Fortunately, there are many online and traditional stores that offer a broad range of eco-friendly reusable bags. Prices vary so you will find bags within your budget and meet your shopping needs. Using eco-friendly reusable bags is a convenient, cost-cutting, and environmentally friendly way of shopping. It is no longer a "paper or plastic" shopping experience. Now, we can say, "No thank you, I have my own eco-friendly reusable bag."
